

ENGINEERING SOLUTIONS

A&C Engineering has a full range of Parker gear, piston, and vane pumps ready for immediate dispatch. Fast, reliable, and ready to go.

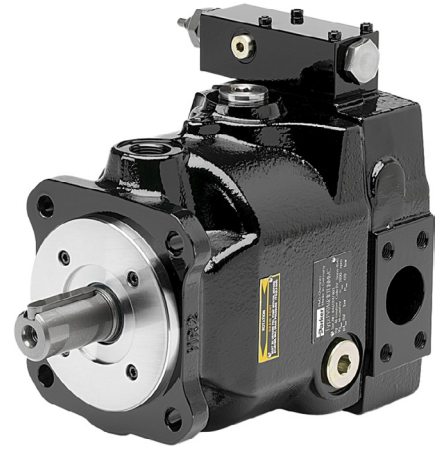

**HYDRAULIC
PUMPS
IN STOCK**

Axial piston variable displacement pumps

Parker PVplus Series

Open circuit, variable swashplate piston pumps. Optimized for heavy duty industrial and marine applications. Operating pressures of up to 420 bar, high speed ratings and a wide range of highly responsive controls. Displacements from 16 to 360 cc/rev.

Industrial vane pumps

Parker T6 & T7 Series

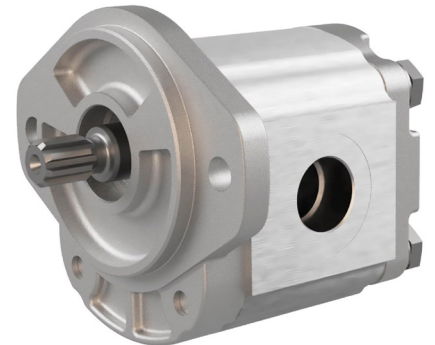

Hydraulic industrial vane pumps reduce installation costs and drive extended life due to their high pressure capability, up to 320 bar in a small operating envelope. They are optimized for industrial applications.

Fixed displacement gear pumps

Parker PGP gear pump

Hydraulic industrial vane pumps reduce installation costs and drive extended life due to their high pressure capability, up to 320 bar in a small operating envelope. They are optimized for industrial applications.

Cast Iron displacement gear pumps

Parker P315, P330, P350, P365, P051, P076 Commercial Intertech pumps

Parker's PGP fixed displacement gear pumps offer high performance and high endurance due to its cast iron construction.
